Make your own lighthouse

Step by step guide

What you will need:

- Plastic cup
- 2 paper cups – 1 white/1 coloured
- Red/black tape
- Clear tape
- Black cardboard circle
- Paper plate
- LED tea light
- Scissors
- Colouring pens

How to make the lighthouse:

Step 1:

Take a coloured paper cup and white paper cup. Using red or black tape, add tape to the cups in any pattern you like, stripes, squares, polka dots. Stack the smaller coloured cup on top of the white cup.

Step 2:

Take the black cardboard circle and cut a straight line from the edge to the centre. Bend at the cut to make a small cone and stick together using tape, then stick it onto the plastic cup. This is the lighthouse roof.

Step 3:

Place the paper cups in the middle of the plate and draw around the bottom. This island has a little path to the sea and a vegetable patch.

Using colouring pens, draw an island for your lighthouse.

Step 4: It's time to put your lighthouse together!

Turn on the LED tea light and place on top of the stacked paper cups. Put the plastic cup on top.

Set your lighthouse in the circle you've drawn on your paper plate, and tape it on to secure it.

You should now have your own lighthouse – well done!
